Abstracts

Ultrasonic nondestructive testing (NDT) solutions are a material defect detection technology based on the principles of high-frequency sound wave propagation. They are used to detect flaws such as cracks, pores, and delamination within metals, composite materials, welds, and structural components without destroying the object being inspected. This solution typically consists of an ultrasonic flaw detector, a phased array system, probe assemblies, and data acquisition and imaging software. It is widely used in aerospace, petrochemicals, nuclear power, automotive manufacturing, rail transit, and additive manufacturing. In the future, this field will develop toward intelligent, automated testing and 3D ultrasonic imaging, combined with AI algorithms to enable rapid identification and real-time monitoring of complex structural defects, supporting high-reliability manufacturing and asset safety management throughout the entire lifecycle.
