Report Overview

Ultrasonic stent coating system for the preparation of polymer coatings to prevent restenosis on the surface of implantable drug-eluting stents. Compared to conventional two-fluid nozzles, ultrasonic nozzles can spray a more uniform drug coating that completely covers the stent and is free of orange peel. The soft atomised spray adheres well to the surface and the morphological characteristics of the coating can be adjusted by modifying the process parameters. In addition, the stent coating obtained by ultrasonic spraying technology is thinner than dip coating. The ultrasonic spraying technique allows precise control of the amount of drug sprayed on the stent, resulting in more precise control of the spraying.
