## Abstracts

Ultrasonic tool holder is a tool holding system that integrates ultrasonic vibration technology. It can introduce high-frequency micro-amplitude vibration into the traditional cutting process, thereby effectively reducing cutting resistance, improving processing accuracy, and extending tool life. The ultrasonic tool holder is mainly composed of an ultrasonic transducer, an amplitude amplifier and a tool clamping mechanism. Its core working principle is to convert high-frequency electrical energy into mechanical vibration through the ultrasonic transducer, so that the tool can cut with ultrasonic vibration during the machining process, thereby achieving more efficient and precise machining effects.
