### Report Overview

Ultrasonic welding machine welding head is the key part of ultrasonic welding equipment, which is composed of vibrating block and welding horn. The vibrating block receives the electric energy of the ultrasonic generator and converts it into high-frequency longitudinal vibration energy, while the welding angle is located at the tip of the vibrating block and contacts the weldment. During the welding process, the vibration of the welding angle generates frictional heat on the contact surface, which softens and melts the plastic material of the welded joint, and then cools and solidifies to form a strong weld.

The global Ultrasonic Welding Machine Welding Head market size was estimated at USD 385.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
