Abstracts

Ultrasonic welding quality inspection all-in-one machine is a device that integrates ultrasonic testing technology and welding quality evaluation functions. By transmitting and receiving signals from ultrasonic sensors, the all-in-one machine can monitor the acoustic characteristics of metal welded joints in real time, and realize non-destructive internal defect detection and evaluation. Its intelligent operation interface allows the operator to intuitively understand the welding quality, adjust and deal with it in time. The all-in-one machine has alarm and recording functions. When a quality problem of a welded joint is found, an alarm will be issued and relevant data will be recorded for subsequent analysis and improvement.

The global Ultrasonic Welding Quality Inspection Machine market size was estimated at USD 365.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
