Abstracts

Ultrasonic welding is the joining or reforming of thermoplastics or other materials through the use of heat generated from high-frequency mechanical motion. It is accomplished by converting high-frequency electrical energy into high-frequency mechanical motion. That mechanical motion, along with applied force, creates frictional heat at the plastic or other materials components" mating surfaces (joint area) so the material will melt and form a molecular bond between the parts. Global Ultrasonic Welding Systems key players include Branson (Emerson), Herrmann, Crest Group, Schunk, Telsonic, etc. Global top 5 manufacturers hold a share over 42%. China is the largest market, with a share about 35%, followed by North America, and Europe, both have a share about 18 percent. In terms of product, Plastic Ultrasonic Welder is the largest segment, with a share over 75%. And in terms of application, the largest application is Automotive.

The global Ultrasonic Welding Services market size was estimated at USD 261.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
