Report Overview:

Demand for ultrasound-guided regional anesthesia (UGRA) is growing steadily due to increasing availability of portable ultrasound machines with high-resolution imaging. Ultrasound allows visualization of the anatomy of the region of interest and enables more informed guidance for needle pathway to the target, while simultaneously helping to avoid needle contact or damage to non-target structures. Ultrasound also allows visualization of the needle tip as it is passed through tissues, confirming alignment with the intended path. This also reduces potential of inadvertent needle trauma to unintended structures.

The Global Ultrasound-Guided Regional Anesthesia Market Size was estimated at USD 1327.80 million in 2023 and is projected to reach USD 2049.19 million by 2029, exhibiting a CAGR of 7.50% during the forecast period.
