## Abstracts

Ultrasound probe is a medical device which is used in imaging the internal organs of the body with the help of sound waves. Sound waves rebound from internal organs in form of echoes which are received by the probe and sent to the computer. The images which are formed by these echoes are known as sonogram. Ultrasound probes are available in different size and shape for use in the body organs. Ultrasound probes can be affected by bacterial contamination, as they are kept in open environment without protection. For disinfecting, soaking of probe in solutions can affect the health of the patients due to contamination of the solution by the probe while soaking. High level disinfection (HLD) is a latest method used for disinfecting the ultrasound probes. It is easy, affordable and quick method for disinfecting the ultrasound probe with safety of patient and hospital staff. Global Ultrasound Probe Disinfection main manufacturers include Advanced Sterilization Products (ASP), Nanosonics and CIVCO Medical Solutions, which totally accounts for the 30% of the market. North America is the largest market of Ultrasound Probe market, with a share over 40%. As for the types of products, it can be divided into Intermediate and Low-Level Disinfection (LLDs and ILDs), High-Level Disinfection (HLD). The most common type is Intermediate and Low-Level Disinfection (LLDs and ILDs), with a share about 55%. In terms of application, it is widely used in Hospital and Clinics, Diagnostic Imaging Centers and Others. The most common application is Hospital and Clinics, with a share about 55%.
