Abstracts

Unbonded flexible pipe includes pipe body and joints, and the pipe body from inside to outside mainly includes skeleton layer, inner lining layer, compressive armor layer, wear-resistant layer, tensile armor layer, intermediate layer and outer cladding layer; the inner part consists of several independent layers, and there is no fixed connection between layers, in which the pipe's bending resistance is also improved, which is more conducive to the relative displacement between layers. Unbonded flexible pipelines are one of the most important devices in offshore engineering, used to transport oil and gas between offshore floats and subsea wells, among others.

The global Unbonded-flexible Pipe market size was estimated at USD 115.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
