## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Unbonded Marine Pipe competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Unbonded Marine Pipe production reached approximately 402.97 km, with an average global market price of around US\$ 263.84 per meter. Gross margin is about 43%. The cost is 150.38 usd. Production capacity 420.00 to 450.00 km. Unbonded marine pipe are flexible pipeline systems specifically designed for offshore oil and gas transportation. They typically consist of an inner tube, a steel wire or steel strip reinforcement layer, and an outer sheath. The inner and outer layers are not bonded together, giving the pipeline high flexibility, fatigue resistance, and deep-sea environment tolerance. Upstream suppliers include high-performance polymer, steel wire/strip, and composite material suppliers, as well as pipeline design and manufacturing equipment manufacturers. Downstream suppliers serve offshore oil and gas development companies, FPSO operators, subsea pipeline installation companies, and EPC contractors, providing installation, commissioning, and operation and maintenance services. Due to their flexibility and deep-sea resistance, unbonded marine pipelines are widely used in deep-water oil and gas field transportation, subsea fluid connections, and floating platform pipelines, serving as crucial infrastructure for deep-sea oil and gas development.

The global Unbonded Marine Pipe market size was estimated at USD 106.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
