The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Uncoated Fine Papers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Uncoated fine paper is a high-quality paper that is not coated on the surface. It is widely used in commercial printing, office documents, book publishing and high-end stationery with its natural fiber texture and excellent printability. This type of paper is made of high-quality wood pulp or cotton pulp through a fine pulping and papermaking process. The surface is smooth but no coating materials (such as kaolin or polymers) are added, thus retaining the original texture and air permeability of the paper. Uncoated fine paper has good opacity, stiffness and durability, and is suitable for a variety of printing methods, including offset printing, letterpress printing and digital printing. Its common gram weight ranges from 60gsm to 200gsm, and the colors are mainly natural white, ivory white or light beige.
