Report Overview

Uncoated Testliner is a type of paperboard material that is commonly used in packaging applications. It is characterized by its uncoated surface, which distinguishes it from other paperboard products that have been coated with various materials to enhance their properties. This uncoated nature allows for better printability and adhesion of adhesives, making it suitable for labels, packaging, and other applications where a smooth, writable surface is required. Uncoated Testliner is typically made from virgin or recycled fibers, and its thickness and strength can vary depending on the intended use.
