Abstracts

An uncooled focal plane array (FPA) infrared detector is a type of thermal detector that converts infrared radiation into electrical signals. It consists of an array of small thin-film bolometers arranged in a matrix in the focal plane of the detector. A bolometer is a device that changes its resistance according to the temperature change caused by the incoming infrared radiation. An uncooled FPA infrared detector does not require any cooling mechanism to operate, unlike some other types of infrared detectors. This reduces the cost, size, weight, and power consumption of the detector. Uncooled FPA infrared detectors are used for various applications, such as military and defense, automotive, smart home, medical, and others.

The global Uncooled Focal Plane Array (Fpa) Infrared Detector market size was estimated at USD 1875.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.35% during the forecast period.
