Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Uncooled Infrared Thermal Imaging Modules competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An uncooled infrared thermal imaging module (also called uncooled thermal core, thermal engine, or LWIR module) is a compact, self-contained device that detects and converts invisible infrared radiation (heat) emitted by objects into a visible image or video, without requiring cryogenic cooling. In 2024, global Uncooled Infrared Thermal Imaging Modules production reached approximately 180 k units, with an average global market price of around US\$2000 per unit. The production capacity for Uncooled Infrared Thermal Imaging Modules in 2024 was approximately 190 k units. The typical gross profit margin for Uncooled Infrared Thermal Imaging Modules between 30% and 60%. The Uncooled Infrared Thermal Imaging Modules value chain begins upstream with key materials such as detector substrates (VOx vanadium oxide, a-Si amorphous silicon), wafer fabrication, ROIC circuits, and optical lenses made from germanium or silicon, along with packaging technologies. The midstream consists of module manufacturers responsible for detector packaging, calibration algorithms, image processing, and module integration. Downstream applications span security surveillance, firefighting, industrial inspection, automotive ADAS, drones, medical screening, outdoor devices, and consumer electronics. Driven by rising smart-system demand and falling costs, the market is rapidly expanding, pushing the industry toward larger scale production, localization, and higher-resolution product development. The uncooled infrared thermal imaging modules market is expanding rapidly, driven by growing demand in security surveillance, industrial inspection, automotive ADAS, firefighting, consumer electronics, and outdoor equipment. Uncooled technology offers advantages such as lower cost, smaller size, and reduced power consumption, enabling

a broad shift from military to large-scale commercial applications. Advances in pixel miniaturization, higher resolution, enhanced algorithms, and AI-assisted recognition are pushing modules toward greater compactness, intelligence, and mass-market affordability. The future market is expected to feature accelerated localization, diversified application scenarios, and continued price decline.

The global Uncooled Infrared Thermal Imaging Modules market size was estimated at USD 360.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
