Abstracts

Under-screen fingerprint recognition solution is an advanced biometric technology that enables a seamless, beautiful and secure unlocking and payment experience by integrating the fingerprint sensor underneath the smartphone screen. There are two main technology paths: optical and ultrasonic. Optical under-screen fingerprint recognition utilizes the self-luminous nature of the OLED screen, and when the user's finger presses the screen, the screen emits light to illuminate the fingerprint, and the reflected light is captured and processed into a fingerprint image through the screen substrate by the optical sensor below. This approach is somewhat dependent on ambient light, but has a high resolution and recognition speed.

The global Under-screen Fingerprint Recognition Solution market size was estimated at USD 2146.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
