## Abstracts

The under water strand pelletizing system is a high-efficiency plastic pelletizing equipment primarily used for producing pellets from thermoplastics such as pp, pe, and abs. This system utilizes underwater cutting technology, where molten plastic strands are directly introduced into water and cut into pellets by rotating blades while being cooled and transported by water flow. Key components include an extruder, underwater pelletizer, cooling water circulation system, and pellet drying unit. Compared to traditional air-cooled pelletizing, underwater pelletizing offers higher cooling efficiency, more uniform pellet shape, and reduced dust pollution. This system is suitable for high-volume, high-quality plastic pellet production and is widely used in industries such as packaging, automotive, and electronics for raw material processing.

The global Under Water Strand Pelletizing System market size was estimated at USD 1227.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
