## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Undercut Anchor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Undercut anchors are fasteners that form reverse interlocking in concrete substrates through a mechanical lock key structure. Their core features are high tensile/shear strength and no expansion stress, making them suitable for thin concrete slabs, edge anchoring, and vibration environments. By 2025, the production volume of undercut anchor will reach approximately 210 million units, with an average global market price of approximately \$2 per unit. Overall, the undercut anchor market, as a high-end niche segment within the construction anchoring industry, is closely tied to the global upgrade of infrastructure construction and the enhancement of safety standards, making its future growth highly certain. Although this market is smaller in scale compared to general-purpose anchors, it demonstrates high value, high profitability, and technology-intensive characteristics due to its irreplaceable role in high-load, dynamic load, and cracked concrete scenarios. Future growth prospects are driven by three key trends: The global energy transition is driving the large-scale construction of renewable energy facilities such as wind power and photovoltaic plants, which impose extremely high seismic and fatigue resistance requirements on foundation anchoring systems, directly boosting demand for undercut anchors; The ongoing expansion and maintenance upgrades of public transportation networks (such as high-speed rail and subways) provide a stable market for core applications like track fixation; Additionally, increasingly stringent building safety regulations, particularly in earthquake-prone regions, are prompting engineers to specify post-cut anchor bolts as a more reliable solution for critical structural connections. Regionally, North America and Europe, as mature markets, set technical standards and demand, with the renovation and upgrading of existing infrastructure and strict safety

regulations driving growth; The Asia-Pacific region, especially China, is the world's largest emerging market, with the rapid development of high-speed rail networks, urban rail transit construction, and offshore wind power projects creating significant demand. Local companies are actively entering the mid-range market through cost-effective strategies, aiming to break foreign monopolies; Emerging markets such as the Middle East and Latin America are still in their early stages. As large-scale energy and infrastructure projects are implemented, the application of post-cut anchor bolts is gradually expanding from pilot projects, with significant future potential. Although development paces vary across global regions, they all point toward a future with increasingly stringent requirements for building safety and reliability. As one of the top-tier technical solutions meeting these demands, the market penetration rate and value share of post-cut anchor bolts are expected to continue rising.

The global Undercut Anchor market size was estimated at USD 438.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
