### Report Overview:

Underfloor heating (UFH) is a heating system that uses embedded pipes or Electric Underfloor Heating cables beneath a finished floor so that heat radiates steadily from floor level.

It is a form of central heating using conduction, radiation and convection. Underfloor heating (UFH)'s advantages main include two aspects: it provides better quality heating without draughts or dry air, but also that, because of its low operating temperature; it can be easily linked in with alternative heating sources that output at the same low temperatures.

In general, underfloor heating (UFH) includes two types such as hydronic UFH systems and electric UFH systems. In this report, hydronic UFH is highlighted due to the extensive application.
