Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Underground Haul Trucks competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of underground mining trucks reached 193,000 units, with an average selling price of US\$8,050 per unit. The annual production capacity of a single underground mining truck production line is approximately 20,000 units, with a gross profit margin of approximately 26.5%. Underground mining trucks are large, heavy-duty vehicles specifically designed for underground mining operations. They feature a low-profile body structure and reinforced chassis, adapting to narrow tunnel environments. These vehicles utilize high-power diesel or electric drive systems, equipped with heavy-duty suspension and braking systems, enabling efficient transportation of ore or waste rock under harsh conditions. Their core characteristics are high load capacity, small turning radius, and strict emission controls, making them crucial equipment for underground mining production and transportation. Upstream raw materials for underground mining trucks include unloading structures, motors, and control systems. The midstream consists of underground mining truck manufacturers, while the downstream primarily involves industries such as metallurgy, mining, and railways. With increasingly stringent environmental policies and technological advancements, electrification and intelligentization have become mainstream trends. Electric mining trucks are gaining market share due to their zero emissions and low operating costs. Meanwhile, unmanned driving technology is maturing in open-pit mines, and some companies have already conducted pilot projects for underground unmanned driving, with further expansion expected in the future. Market demand is strong in East China, South China, and North China due to abundant mineral resources and well-developed infrastructure. Emerging markets and developing countries have significant growth

potential for underground mining truck demand due to mining development needs. International brands such as Caterpillar and Komatsu dominate the high-end market, while domestic companies such as Lingong and XCMG are continuously strengthening their competitiveness in the domestic market through technological innovation and localized services, with some products already exported overseas.

The global Underground Haul Trucks market size was estimated at USD 1554.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
