Abstracts

Underwater fishing cameras are specialized electronic devices designed to provide real-time visual feedback of the aquatic environment beneath the water's surface, primarily used by anglers to locate fish, identify species, observe fish behavior, and assess underwater structures such as vegetation, rocks, or drop-offs. These cameras typically feature high-resolution imaging sensors, waterproof and pressure-resistant housings, built-in infrared or LED lighting for low-visibility conditions, and are often equipped with monitors or wireless connectivity for live streaming to smartphones or dedicated screens. They may also include additional functionalities such as depth sensors, temperature gauges, recording capabilities, and adjustable mounting systems to enhance their utility in various fishing scenarios, ranging from ice fishing to deep-sea angling.
