The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Underwater Solid-State Battery competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Underwater solid-state batteries are battery systems that use solid electrolytes instead of traditional liquid electrolytes, specifically designed for energy supply in the high-pressure, low-temperature, and highly corrosive environments of the deep sea. Their core advantages include zero leakage risk, high safety, strong pressure resistance, and long cycle life, making them suitable for platforms such as ROVs, AUVs, and underwater sensors. The product is priced at approximately \$6,800 per unit, with global sales of approximately 223,000 units. The upstream supply chain for underwater solid-state batteries consists of cell materials (such as lithium, cobalt, nickel, and solid electrolytes), high-strength casing materials (titanium alloys, PEEK, ceramics), and key components such as BMS control chips, cables, and sealing rings, ensuring excellent safety and energy density in the high-pressure environment of the deep sea. Downstream applications are widespread among marine equipment manufacturers, energy companies, research institutions, and military units, providing stable power support for platforms such as ROVs, AUVs, underwater sensors, and submarines. Future development trends will focus on lightweight shell design, AI-linked intelligent power management, the application of underwater fast charging and wireless charging technologies, and the construction of a battery cell recycling and green manufacturing system, driving underwater energy systems toward efficiency, safety and sustainability.

The global Underwater Solid-State Battery market size was estimated at USD 1516.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00% during the forecast period.
