Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Uni-directional Speakers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A unidirectional speaker is an acoustic device that can control the direction of sound propagation. The sound is mainly propagated in a specific direction instead of spreading in all directions. This type of device is usually called a directional speaker, directional sound, directional horn, etc. The core principle of a unidirectional speaker is ultrasonic beamforming technology. This technology uses ultrasonic waves (sound waves with a frequency higher than 20kHz, which cannot be heard by humans) and beamforming technology to control the propagation direction and intensity of sound waves. By interfering with ultrasonic waves, the sound waves can be focused on a specific location, so that the sound can only propagate in a certain area without interfering with the surrounding environment.

The global Uni-directional Speakers market size was estimated at USD 926.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
