Abstracts

A Unidirectional Latent Traction AGV is an automated guided vehicle (AGV) designed to pull or tow loads in a single direction along a fixed path or predetermined route. Unlike omnidirectional or bidirectional AGVs, this type of vehicle operates in one direction, making it simpler and more cost-effective for specific tasks such as material transport in warehouses, production lines, or logistics centers. Typically powered by batteries or other drive systems, the unidirectional latent traction AGV is ideal for environments where the focus is on efficient, long-distance, and high-load transport without the need for frequent direction changes. Its design is optimized for reliability, low maintenance, and simplicity, particularly in applications with space constraints or linear transportation needs.

The global Unidirectional Latent Traction AGV market size was estimated at USD 235.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.00% during the forecast period.
