Report Overview

Uninterrupted Power Supply (UPS) is an electrical System that provides emergency power to a load when the input power source fails. Uninterrupted Power Supply (UPS) converts incoming AC to DC through a rectifier, and converts it back with an inverter. Uninterrupted Power Supply (UPS) differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitor, or flywheels. The on-battery runtime of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment.

The global Uninterrupted Power Supply (UPS) Systems market size was estimated at USD 12040 million in 2023 and is projected to reach USD 15526.65 million by 2030, exhibiting a CAGR of 3.70% during the forecast period.

North America Uninterrupted Power Supply (UPS) Systems market size was USD 3137.28 million in 2023, at a CAGR of 3.17% during the forecast period of 2024 through 2030.
