## Abstracts

A universal embodied data platform is a data infrastructure system for the research and development and application of embodied intelligence. It aims to aggregate, manage, and process real-world interaction data from multimodal sensors (vision, voice, touch, motion, etc.). By establishing unified data standards, annotation systems, and simulation interfaces, this platform provides data support for the training, validation, and iterative optimization of embodied systems such as robots, intelligent agents, and virtual humans. Universal embodied data platforms typically feature high-concurrency data collection, cross-scenario data fusion, cloud-edge collaborative computing, and AI-driven data augmentation. They are widely applicable in intelligent manufacturing, autonomous driving, service robotics, education and training, virtual reality, and other fields. They serve as a critical underlying support for the implementation of general artificial intelligence from perception to action. The downstream applications of universal embodied data platforms primarily include intelligent robots, autonomous driving, intelligent manufacturing, virtual humans, AR/VR interactive systems, smart homes, education and training, and digital twins. These fields rely on the large-scale, high-quality, multimodal embodied data provided by the platform for model training, motion planning, environmental perception, and behavioral decision optimization. For example, service robotics companies leverage platform data to enhance the naturalness and safety of human-machine interactions; autonomous driving manufacturers leverage embodied scenario data to simulate complex traffic environments; and virtual humans and metaverse applications leverage the platform to generate realistic body language and emotional expressions. The Universal Embodied Data Platform has thus become the core data engine for the implementation and industrialization of AI-powered physical intelligence. The Universal Embodied Data Platform boasts a gross profit margin of 73%.

The global Universal Embodied Data Platform market size was estimated at USD 2533.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.20% during the forecast period.
