## Abstracts

Universal endonuclease, a genetically engineered enzyme derived from *Serratia marcescens*. It can degrade all forms of DNA and RNA, including single-stranded, double-stranded, linear, circular, native and denatured nucleic acids, and digest them into 5-monophosphate oligonucleotides of 3-8 bases in length, without base recognition specificity. In addition, nonspecific universal nuclease can maintain high stability and digestive activity under a wide range of conditions (6M urea, 0.1M guanidine hydrochloride, 0.4% Triton X100, 0.1% SDS, 1mM EDTA, 1mM PMSF), and is very suitable as the preferred enzyme preparation for various scientific research and vaccine, protein, and polysaccharide drug industries, used to remove nucleic acid residues in samples or products, and improve sample purity and product biological efficacy.

The global Universal Endonuclease market size was estimated at USD 85.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
