Report Overview

Universal metal expansion joints are connectors used in pipeline systems to absorb the thermal expansion, contraction, and displacement of pipelines under temperature changes or vibration. The universal metal expansion joint is composed of two metal corrugated pipes connected by flanges, which can bend and twist in multiple directions to achieve displacement compensation and vibration absorption of the pipeline. It is usually made of stainless steel, copper alloy, or other corrosion-resistant materials, and has good pressure resistance, temperature resistance, and corrosion resistance.
