Abstracts

Universal Power over Ethernet (UPOE) is an advanced networking technology that allows Ethernet cables to deliver both data and power to devices over a single connection. UPOE provides up to 60 watts of power per port, significantly higher than the standard Power over Ethernet (PoE), which offers 15.4 watts. This enhanced power capacity enables UPOE to support a wider range of devices, such as IP cameras, wireless access points, and VoIP phones, without the need for separate power sources. UPOE simplifies installation, reduces cabling complexity, and is commonly used in enterprise networking environments for efficient power and data transmission.

The global Universal Power Over Ethernet (UPOE) market size was estimated at USD 877.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
