Abstracts

Unleaded gasoline for cars is a refined petroleum product specifically designed for use in spark-ignition internal combustion engines, distinguished by its lack of tetraethyl lead additives to reduce harmful emissions and comply with modern environmental regulations. It consists of a complex mixture of hydrocarbons, primarily derived from crude oil through fractional distillation and additional refining processes such as catalytic cracking and reforming, which adjust its octane rating to prevent engine knocking and ensure optimal performance. The formulation often includes detergents and other additives to maintain engine cleanliness, improve fuel efficiency, and minimize carbon deposits, aligning with both automotive engineering requirements and governmental standards for air quality and vehicle emissions.
