Abstracts

An unmanaged network switch is a plug-and-play networking device that operates without user configuration, automatically forwarding data packets between connected devices using MAC addresses to create a local area network (LAN). It lacks features such as VLAN support, Quality of Service (QoS) settings, or remote management capabilities, making it a simple, cost-effective solution primarily used in small office/home office (SOHO) environments or for expanding ports in settings where basic connectivity and minimal setup are prioritized over advanced network control or security.

The global Unmanaged Network Switch market size was estimated at USD 3448.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
