Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Unmanaged Switches competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Unmanaged Switches production reached approximately 0.8 million units, with an average global market price of around US\$ 1500 per unit. An unmanaged switch is a plug-and-play network device that can be integrated into a local area network without requiring complex configuration. Its primary function is to interconnect multiple Ethernet ports and forward data frames between network nodes in a transparent manner. It lacks advanced features such as network management, VLAN configuration, port mirroring, IGMP snooping or deep QoS settings, which means its cost is relatively low, deployment is simple, and it is suitable for home networks, small offices or branch environments. Because it does not require management software or firmware configuration, deployment is rapid, maintenance is minimal, and for many standard network demands it is fully adequate. As a result, unmanaged switches are widely used in enterprise networks as "non-critical path" expansion devices. The upstream for unmanaged switches includes printed circuit board (PCB) manufacturers, Ethernet port controller switch-chip suppliers (such as Broadcom, Realtek, Marvell), metal housings and heatsink structures (aluminum, steel, plastic enclosures), power supply modules (switch-mode power supplies), connectors (RJ-45 ports, PoE power modules), and firmware/software providers. The downstream customers include home users, small offices, retail stores, educational institutions, branch office networks, IoT/edge device extension scenarios. Typical companies include network-equipment brands (e.g., NETGEAR, TP-Link, D-Link) and system integrators. Upstream module suppliers provide chips, PCBs, housings etc., while downstream integrators package and sell the finished devices to end users. The annual production capacity of a single-line

Unmanaged Switches is approximately 8k units, with a gross profit margin of approximately 25%-40%. The unmanaged Ethernet switch market continues to grow steadily, driven by the ongoing digital transformation of small and medium-sized enterprises and the expansion of home and small office networks. With the rapid adoption of smart home systems, security surveillance, and industrial IoT applications, unmanaged switches have become a mainstream choice for edge connectivity and basic networking due to their plug-and-play simplicity, low cost, and high reliability. Although these devices offer limited configurability, they remain indispensable in entry-level and cost-sensitive network environments. The market is gradually shifting toward gigabit and high-port-density models, while manufacturers are enhancing product value through PoE support, energy-efficient chipsets, and rugged metal housing designs.

The global Unmanaged Switches market size was estimated at USD 1199.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.40% during the forecast period.
