Report Overview

Unmanned aerial surveying resolves many of the traditional issues with manned operations. In particular, UAVs are now being utilized heavily in agriculture, real estate, utilities, construction, filmmaking, and even law enforcement. UAVs can fly lower than manned vehicles, thereby allowing them to take the place of both manned aerial surveys and, in some cases, ground crews as well. This reduces the necessity for consolidating information between different companies. Because UAVs can travel lower to the ground, they also complete aerial surveying with greater detail, allowing for more accurate results.

The global Unmanned Aerial Survey Service market size was estimated at USD 4012 million in 2023 and is projected to reach USD 5683.03 million by 2030, exhibiting a CAGR of 5.10% during the forecast period.
