Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Unmanned Charging Vehicles competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Unmanned charging vehicles are equipped with autonomous driving technology, batteries and fast charging equipment, and can autonomously navigate to a designated location to charge new energy vehicles. It integrates L4 level unmanned driving, high-precision navigation, mobile energy storage and other technologies. Car owners can make reservations through their mobile phones and let the charging vehicle automatically drive to the parking space to achieve "parking and charging". Unmanned charging vehicles can be understood as "autonomous driving" charging piles or mobile charging piles, which are essentially an intelligent upgrade of the existing manual "distribution-type energy storage mobile charging mode". Unmanned charging vehicles have many advantages such as built-in energy storage, unmanned driving, small footprint, flexible and convenient deployment, and many application scenarios. There is huge market space in the future. Many automobile manufacturers, autonomous driving companies, energy manufacturers, charging service companies, etc. have already laid out the launch of unmanned charging vehicle products in advance in order to seize more market share. From the perspective of the industry structure of charging piles, traditional charging piles are still the mainstream, and mobile charging piles such as unmanned charging vehicles can serve as an effective supplement. With more and more companies developing new products, the unmanned charging vehicle market is expected to achieve rapid growth in the future.

The global Unmanned Charging Vehicles market size was estimated at USD 1308.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

10.30% during the forecast period.
