Report Overview:

Unmanned surface vehicles (USV) or autonomous surface vehicles (ASV) are vehicles that operate on the surface of the water (watercraft) without a crew. USVs are valuable in oceanography, as they are more capable than moored or drifting weather buoys, but far cheaper than the equivalent weather ships and research vessels, and more flexible than commercial-ship contributions. Wave gliders, in particular, harness wave energy for primary propulsion and, with solar cells to power their electronics, have months of marine persistence for both academic and naval applications.

The Global Unmanned Surface Vehicles (USVs) Market Size was estimated at USD 88.00 million in 2023 and is projected to reach USD 261.45 million by 2029, exhibiting a CAGR of 19.90% during the forecast period.
