Report Overview

UPVC windows are un-plasticized, as no additive is added to make the material flexible. UPVC is a thermoplastic material with rigidity and significant modulus of elasticity. Several years of RandD has made UPVC the most sophisticated substance available as a building material for doors, windows, shutters, automobile body parts, and even credit cards. It is frequently referred to as rigid PVC.

The growing demand for energy-efficient windows is estimated to be one of the major factors that having a positive impact on the growth of the market. Customers are increasingly looking for windows with ENERGY STAR rating. These windows ensure that the energy performance of their buildings satisfies the new building code standards. The changes in building code in several countries such as Canada will further boost the demand for ENERGY STAR windows. This in turn, drives the replacement demand from high-rise commercial buildings.
