Abstracts

Unshielded AC power cords are electrical cables designed to transmit alternating current from a power source to an electrical device without incorporating any electromagnetic shielding, making them cost-effective and suitable for general-purpose applications where minimal electromagnetic interference is acceptable. These cords typically consist of insulated copper conductors, an outer jacket for protection, and standardized connectors such as NEMA or IEC types, ensuring compatibility with a wide range of household, office, and light industrial equipment. The absence of shielding reduces both manufacturing complexity and overall weight, though it limits their use in environments sensitive to electrical noise or requiring strict regulatory compliance for emissions.

The global Unshielded Ac Power Cord market size was estimated at USD 1072.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
