Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Unsupported Beanbag competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An unsupported beanbag is a large cloth bag filled with polystyrene granules (like those in a sacco chair), dried beans, or other similar materials. It is an ergonomic chair whose shape is adjustable by the user. Although originally designed as a seat, its irregular shape often leads to confusion with upholstered stools or footstools. In 2024, the global production of unsupported beanbags reached 11.82 million units, with an average selling price of \$129 per unit and a gross profit margin of approximately 27%.

The global Unsupported Beanbag market size was estimated at USD 1525.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
