Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Untethered Dead Reckoning (UDR) Module competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Untethered Dead Reckoning (UDR) Module production reached approximately 438 k units, with an average global market price of around US\$ 523 per unit. An Untethered Dead Reckoning (UDR) module is a positioning device that combines Global Navigation Satellite System (GNSS) (like GPS) with an internal inertial measurement unit (IMU) to provide continuous navigation data. The IMU includes an accelerometer and gyroscope to track a device's speed and direction, allowing the module to calculate accurate positioning even when GNSS signals are weak or lost, such as in urban canyons, tunnels, or parking garages. UDR eliminates the need for external sensors, like vehicle speed sensors, making it "untethered" and simpler to install in various applications. The upstream segment, with the highest technical barriers and the highest concentration of value, primarily provides core hardware components and software algorithms to midstream module manufacturers. Chips, inertial sensors, and auxiliary sensors are key components, with well-known manufacturers including Bosch, TDK, STMicroelectronics, Analog Devices, and Honeywell. The downstream segment, where UDR modules find practical application, offers a vast market potential and is the core driving force behind the development of the entire industry chain. Autonomous driving and smart cars are key application areas. In tunnels, underground garages, urban canyons, and other locations where GNSS signals are lost or weak, UDR is the only reliable means of maintaining continuous, high-precision positioning. It is standard equipment for autonomous vehicles above Level 3.

The global Untethered Dead Reckoning (UDR) Module market size was estimated at

USD 229.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
