Abstracts

Untreated fluff pulp is a natural wood fiber pulp derived from softwoods (e.G., pine, spruce) via mechanical or chemical pulping processes without additional chemical modification. Characterized by long fibers, high bulk, and absorbency but limited compression resistance and liquid retention, it serves as a core absorbent material in hygiene products (e.G., diapers, sanitary pads) or as filler for medical dressings and industrial cushioning. Production emphasizes fiber purity and brightness while retaining natural lignin, offering cost-effectiveness and environmental benefits. As a foundational material in disposable hygiene products, its demand is closely tied to the sanitary goods industry.
