## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on UPR Bulk Molding Compounds competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global UPR Bulk Molding Compounds sales reached approximately 260 k tons, with an average global market price of around US\$ 2100 per ton. UPR Bulk Molding Compounds are thermoset molding materials based on unsaturated polyester resin (UPR), blended with chopped glass fibers, mineral fillers, and initiators to form moldable bulk. Curing relies on free-radical polymerization, rapidly forming an insoluble, rigid structure under heat or catalyst activation. Known for excellent electrical insulation, chemical resistance, and low cost, they are ideal for mass-producing complex parts with precise surface finishes. Fillers (e.g., calcium carbonate, aluminum hydroxide) adjust flowability, reduce costs, or impart flame retardancy, while fiber reinforcement enhances flexural strength and fatigue resistance. Typical applications include low-voltage electrical enclosures, sanitary ware, and building insulation components. Compatible with compression and transfer molding, their scrap can be recycled as filler, aligning with circular economy practices.

The global UPR Bulk Molding Compounds market size was estimated at USD 546.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
