### Report Overview

Uranium Testing Service refers to the various types of tests performed to detect and measure the levels of uranium present in a given sample. Uranium is a naturally occurring radioactive element that is commonly found in rocks, soil, water, and other natural materials. It is also used as a fuel in nuclear power plants and in the production of nuclear weapons, making it an important material for energy and military purposes.

Uranium testing services typically use advanced analytical techniques, such as mass spectrometry, gamma spectrometry, and neutron activation analysis, to accurately identify and quantify the levels of uranium present in a given sample.
