The upstream of the Navigation on Autopilot (NOA) solution industry chain mainly includes suppliers of high-performance automotive-grade chips (such as NVIDIA Orin and Horizon Robotics J5), LiDAR, cameras, millimeter-wave radar, and other perception hardware, as well as high-precision map service providers, positioning module (GNSS/IMU) providers, and basic operating system (such as QNX and Linux) providers. The midstream is the core technology integration layer, responsible for the development and system integration of full-stack algorithms encompassing perception, decision-making, planning, and control execution, and completing extensive data collection and simulation verification for urban scenarios. The downstream consists of intelligent electric vehicle manufacturers and end-users equipped with NOA functionality, while also relying on policy and regulatory support (such as L3 access pilots) and the collaborative advancement of urban road digital infrastructure (such as V2X roadside units). As complex urban scenarios become the focus of competition in intelligent driving, the industry chain is accelerating its evolution towards deep integration of "chip-algorithm-vehicle-data closed loop." The gross profit margin of major companies in the industry ranges from 45% to 65%.
