Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Urea Phosphate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Urea phosphate is a ruminant feed additive that is superior to urea and can provide both non protein nitrogen and phosphorus simultaneously. Feed additive: specifically designed for the nutritional supplementation of ruminant and herbivorous livestock such as cattle and sheep, with significant effects on the feeding of dairy, meat, and young livestock. Efficient fertilizer: Its characteristics have significantly better application effects on plants in the early and middle stages than traditional fertilizers such as urea, ammonium phosphate, and potassium dihydrogen phosphate. Silage preservative: Urea phosphate is a good preservative for fruits and vegetables, as well as silage for forage and feed, with excellent silage preservation effect. Industrial use: flame retardant; Cleaning agent; rust remover; preservative. In 2024, global Urea Phosphate production reached approximately 588.23K MT, with an average global market price of around US\$ 986 per MT. The annual production capacity of a single production line is 15000 tons, with a gross profit margin of around 20%. Upstream industry: The cost of upstream raw materials accounts for about 80% of the total cost. 1. Basic raw materials: Phosphate ore: the most fundamental source. The price and supply stability of phosphate ore are greatly influenced by national policies, environmental requirements, and mining quotas. Sulfur/sulfuric acid: a key raw material for producing wet process phosphoric acid. The price of imported sulfur has a significant impact on costs. Urea: Originating from the fertilizer industry, its price exhibits significant cyclicity. 2. Direct raw material: phosphoric acid. Downstream industry core customers: Ruminant animal feed factories; Pre mixed material production enterprises; Agricultural fertilizers, etc.

The global Urea Phosphate market size was estimated at USD 580.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
