Abstracts

Urea silicate resin system refers to a specialized class of inorganic-organic hybrid polymers formed by the reaction of urea with silicate compounds, typically sodium silicate or potassium silicate, resulting in a three-dimensional network structure that combines the thermal stability, fire resistance, and inorganic durability of silicates with the flexibility, adhesion, and processability contributed by the organic urea component. These systems are primarily utilized as high-performance binders, coatings, and adhesives in demanding applications such as refractory materials, foundry molds, high-temperature insulation, and fireproofing, where they provide excellent resistance to heat, chemicals, and abrasion while maintaining structural integrity under extreme conditions.

The global Urea Silicate Resin System market size was estimated at USD 275.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
