Abstracts

A Urinal Sanitiser is a specialized cleaning and deodorizing agent designed to maintain hygiene, reduce odor, and prevent the buildup of bacteria, scale, and uric acid deposits in urinals. It is typically dispensed through an automated or manual system that releases a controlled amount of sanitizing fluid into the urinal bowl or flush water during each use. Urinal sanitisers often contain disinfectants, surfactants, and pleasant fragrances to ensure cleanliness and a fresh-smelling restroom environment. They are commonly used in high-traffic public and commercial washrooms such as those in offices, airports, schools, and shopping centers. In addition to promoting a sanitary facility, urinal sanitisers help prolong the life of plumbing systems by reducing blockages and scaling, while also improving the overall user experience through effective odor control and visual cleanliness.
