Report Overview

Urokinase (CAS 9039-53-6) is a serine protease enzyme derived from human urine or recombinant DNA technology, primarily used as a thrombolytic agent to dissolve blood clots in conditions such as pulmonary embolism, deep vein thrombosis, and acute myocardial infarction. Its mechanism involves activating plasminogen to plasmin, which degrades fibrin clots. The market for urokinase is driven by increasing incidences of cardiovascular diseases and thrombosis-related disorders, alongside advancements in biotechnology enhancing production efficiency. However, competition from alternative thrombolytics like tissue plasminogen activator (tPA) and stringent regulatory requirements for biologics pose challenges. Geographically, North America and Europe dominate due to robust healthcare infrastructure, while Asia-Pacific shows growth potential with rising healthcare expenditure and disease prevalence. Pricing pressures and patent expirations also influence market dynamics, with manufacturers focusing on cost-effective production and expanding applications in research and diagnostics.

The global Urokinase(CAS 9039-53-6) market size was estimated at USD 48.79 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.31% during the forecast period.
