Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on USB 3.2 Gen 2x2 Cable competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of USB 3.2 Gen 2x2 cables is 143 million, with an average price of US\$4.06 per cable. A USB 3.2 Gen 2x2 cable is a high-speed cable that can transfer data at up to 20 Gbps by using two 10 Gbps lanes simultaneously, and it only uses the USB Type-C connector. This technology is designed for demanding applications like high-performance storage, 4K video, and VR, and it is backwards compatible with older USB standards. The upstream supply chain for USB 3.2 Gen 2x2 cables primarily includes raw materials such as high-purity copper conductors, silver-plated wire, insulation materials (such as polytetrafluoroethylene (PTFE) and polyethylene (PE), braided shielding, connector metal housings, and gold-plated terminals. Upstream companies include Furukawa Electric, Sumitomo Electric Industries, Nanya Cable, Baosheng Technology, Changfei Fiber Optics, Luxshare, and Amphenol. Downstream applications are broad, encompassing high-performance storage devices, external GPU docking stations, high-resolution displays, industrial equipment connectivity, and consumer electronics. The downstream market is focused on laptops, servers, high-speed SSD enclosures, and game consoles, where data transfer speed and compatibility are key competitive factors. The development trend of USB 3.2 Gen 2x2 cables is characterized by higher bandwidth, increased durability, and improved standardization. With the increasing popularity of USB4 and Thunderbolt 4, Gen 2x2, as a transitional high-speed transmission solution, continues to offer advantages in mid-to-high-end peripherals and industrial connectivity. Driving factors include the surge in data transmission demand, 4K/8K video transmission, the integration of VR devices with high-power charging, and growing demand for enterprise-

level data backup. Obstacles primarily include high manufacturing precision requirements, the difficulty of controlling signal loss, rising EMI shielding costs, and compatibility risks caused by the rapid iteration of new standards (USB4 and Thunderbolt). Furthermore, the high investment in high-speed testing equipment raises the entry barrier for small and medium-sized enterprises. USB 3.2 Gen 2x2 cable production lines have an annual production capacity of approximately 2 million to 4 million cables. Due to high raw material costs and significant technical barriers, gross profit margins typically range from 25% to 35%. However, manufacturers with in-house high-speed signal design and connector development capabilities can achieve gross profit margins exceeding 40%. Material costs account for approximately 60% of total costs, with copper and shielding being the primary expenses.

The global USB 3.2 Gen 2x2 Cable market size was estimated at USD 581.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
