## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on USB-C Active Optical Cables competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. USB-C Active Optical Cables (AOCs) are high-performance transmission cables that use optical fiber as the primary medium for data transfer, supplemented by copper wires for power delivery. These cables are designed with integrated electronics that actively convert electrical signals to optical signals and back again, enabling high-speed data transmission over longer distances than traditional copper-based USB-C cables—typically up to 30 meters or more. They support USB 3.x, DisplayPort Alt Mode, and Thunderbolt protocols, depending on the model, making them ideal for applications requiring high bandwidth, low signal degradation, and electromagnetic interference (EMI) resistance. USB-C AOCs are commonly used in fields such as AR/VR, professional AV, industrial automation, and high-end computing.

The global USB-C Active Optical Cables market size was estimated at USD 584.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.90% during the forecast period.
