Abstracts

USB Type-C cables are a universal connector for data transfer, charging, and video output. They feature an oval connector that is reversible, making it more convenient than previous USB connectors. USB Type-C has gradually become the mainstream interface standard in the world. More and more devices, including smartphones, laptops, tablets, game consoles, etc., have begun to adopt USB Type-C interfaces. This trend has driven the growth of demand for USB Type-C cables. With the demand for higher charging speeds for smart devices, the USB Power Delivery (PD) standard has become mainstream, which can charge devices in a shorter time. USB Type-C cables have become the first choice in charging solutions because they support the PD protocol. The USB Type-C cable market is highly competitive, with low market concentration and many global participants. Due to the relatively complex standard requirements of the USB Type-C interface, the market is flooded with various cables of varying quality. Some low-quality cables may have problems such as slow charging speed, overheating, and damage to devices, which cause troubles to consumers. Against the backdrop of increasing global environmental awareness, manufacturers of USB Type-C cables may gradually adopt environmentally friendly materials to reduce the use of plastics and other harmful substances, and promote the industry towards sustainable development. As a standard interface, USB Type-C has great development potential and will become a more common connection solution in the future, especially driven by new technologies such as 5G, USB4 and Thunderbolt 4, the market will usher in more innovations and changes.

The global USB Type-C Cables market size was estimated at USD 1456.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
