Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on USB4 SSD Enclosure competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of USB4 SSD enclosures was 17.6 million units, with an average price of \$137 per unit. A USB4 SSD enclosure is an external hard drive enclosure that connects to a computer using a USB4 interface and typically houses a solid-state drive (SSD). It achieves data transfer speeds of up to 40Gbps via USB4's high-speed channel, while also allowing for the transfer of display data. The main features of this enclosure are its fast transfer speeds and strong connectivity, enabling users to quickly access and transfer stored data. The upstream supply chain for USB4 SSD enclosures primarily includes suppliers of controller chips, interface control modules, and thermal structure materials. Representative companies include Silicon Motion, Phison, Realtek, STMicroelectronics, and Texas Instruments. Downstream customers are mainly system integrators and peripheral brands, such as Seagate, Samsung, ADATA, Western Digital, and Lexar. The downstream market focuses on high-performance consumer electronics and professional data transmission applications, particularly driven by the continuously growing demand for high-speed, low-latency data transmission devices from creators, gamers, and IT engineers. Market trends are characterized by the widespread adoption of high-speed interfaces and the growth of data-intensive applications, leading to rapid demand increases. Driving factors include enhanced compatibility resulting from the convergence of USB4 and Thunderbolt 4 standards, rising demand for external high-speed storage in AI computing and video editing, and the long-term trend of portable SSDs replacing traditional external hard drives. The main obstacles are the high cost of USB4 chipsets, complex heat dissipation designs, and compatibility issues with different host interfaces, which

limit acceptance among some users. The annual production capacity of a single USB4 SSD enclosure production line is approximately 200,000 to 300,000 units. High-end metal heat dissipation structures and products with active temperature control have a gross profit margin of approximately 30% to 35%, while ordinary aluminum alloy casing products have a margin between 20% and 25%.

The global USB4 SSD Enclosure market size was estimated at USD 2411.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
